### Location diagram

On the location diagram shown to the right, please indicate the location and type of tree requested to be removed. Please add all features such as decks, garden sheds, dog runs, etc. that will assist in identifying the tree(s) in question.

Please identify the tree(s) on the property by tying, flagging or otherwise marking the tree(s).

All proposals must meet the regulations below. You have the right to make an appeal to Council for consideration of a ruling of non-compliance with the regulations.

### Regulations:

The By-Laws of Redwood Meadows prohibits the cutting of live trees that have a trunk of 6 inches (15 cm) or greater in diameter without specific permission granted by the Townsite Administration.

Valid reasons for cutting live trees are:

1. The tree is demonstrably diseased;
2. The tree is leaning substantially towards the house or otherwise presents a danger to both structures and/or designated active play space (i.e. sandboxes, swing sets, etc.);
3. The tree and its limbs overhang the roof of the house causing damage to the roof, eaves, chimneys;
4. The tree roots are presenting a danger to the house foundation, driveway, or utilities;
5. The trees (in case of a cluster of trees) are too close together to allow for adequate growth. This should be substantiated by an evaluation by a horticulturist, landscape architect, landscape professional.

Diagram example:  
Use a reference point such as a corner of the house and show approximate dimensions from that point as in the example below.
